Renovation roller shutters

Expedient renovation package.

When replacing windows during renovations, it is important to find customised sun shading and to use existing components. Sound insulation and thermal protection are an important issue for owners, particularly where older buildings are concerned. If the existing shutter boxes are still usable, renovation roller shutters for placing on the window frame provide an ideal solution - without damaging the facade during installation.

■ **Fields of application**

■ **Product benefits**

■ **Features**

- refurbishment, when replacing windows
- continued use of existing lintel boxes
- For use in existing shutter boxes
- Durable system with insulation shells made of polystyrene and reinforcement profiles
